

WATCHDOG

Watchdog is a fraud management tool used to set rules and filters, to zero in on preventing and detecting suspicious transactions. Transactions can be declined/approved, pre and post authorization.

This fraud-detering tool (Watchdog™) is used for its extensive reporting capabilities, while giving the merchants a simple, fast and effective way to view all of their transactions in one place.

Watchdog is one of the first payment tools to use a machine learning algorithm. Innovative and ahead of its time, models are exposed to new data, while independently adapting to the data as it comes in. (More Data = More Security.) The most important part of combating fraud is DETERRENCE.

Monitor your transactions today with WatchDog™!
